

Introduction 1.

"Built as a Software as a Service (SaaS) model" This document aims to outline the basic requirements for a Customer Relationship Management (CRM) system. The system will be tailored specifically to the needs of moving companies in Switzerland, providing a centralized platform for managing (SaaS) the daily operations of adding customers and employees, tracking expenses and revenues, managing tasks, creating quotes, and facilitating online payments. Day-to-day operations from adding customers and employees, tracking expenses and revenue, managing tasks, creating quotes, and facilitating online payments. The interface must be in German, with a focus on an intuitive and efficient user experience.

Key objectives of the project 2.

- Provide a unified SaaS platform for moving companies in Switzerland.
- Enabling business leaders to efficiently manage their customers, employees, and tasks. -
- Simplify the process of creating and sending quotes to customers -
- Provide customers with a secure online payment option. -
- Provide analytical insights to the general manager on subscription and revenue performance -
- Provide analytical insights to corporate managers about their revenue and expenses -
- Improve communication and workflow between managers and employees. -

Roles: User Roles 3.

The system interacts with three main types of users, each with specific permissions and tasks

Admin): (Super administrator. -

SaaS. He is the owner of the platform .

Responsible for managing corporate accounts (add, activate, deactivate, delete)

- Monitor overall platform revenue and subscriptions ○

- View graphs and aggregated reports ○

- Manage general system settings ○

- **Company Admin/Manager:**

The primary user within each shared transportation company.

Responsible for all operations related to their company: Customer management, employees, quotes, tasks, expenses, and revenues.

- Access a customized dashboard for their company. ○

- **Employee:**

An employee of a particular transportation company.

- Interacts primarily with assigned tasks. ○

- Tasks are assigned by the company manager. ○

- **Client:**

A customer who receives quotes and makes payments.

Does not have an account in the system, but interacts with quotes via email and the payment interface. ○

4. Functional Requirements:

4.1. Super Admin Dashboard:

Corporate Management -

Ability to add new companies to the system (includes: Company name, contact information, subscription start date ○

Ability to activate/disable company accounts (affecting the company's access to the system)

Ability to delete company accounts (with dependent data processing)

Display a list of all subscribed companies with their status and subscription date ○

Manage subscriptions and revenue -

Display a dashboard with graphs showing the total monthly revenue of the platform ○

View subscription details for each company (company name, subscription status, activation date)

Track monthly subscription revenue from each company ○

4.2. Company Admin/Manager Dashboard:

Manage clients -

Add, edit, delete customer data (name, contact information, address, customer source, notes)

Search and filter the customer list ○

View a list of customers with a summary of their information ○

Employee Management -

Add, edit, delete employee data (name, contact information, role/function.) No attendance tracking ○

View a list of all employees registered in the company. ○

(Tasks:) Manage Tasks -.

Create new tasks and assign them to specific employees.

Requirement file (for each task to clarify the details for the employee) ○ Supports types ("File" "Requirement Upload" ○

JPG). DOCX, PDF, common files such as

). Track the status of tasks (Pending, In Progress, Completed, Canceled ○

Final result file (which the employee uploads upon completion) "Task View" File ○

The ability to search and filter tasks. ○

(Offerte): Manage quotes -.

Create detailed quotes for transportation, cleaning, storage and other services.

Include all options analyzed from the reference images (multiple addresses, floor and elevator details, ○ Define individual services such as moving, packing, cleaning, disposal, storage, packaging materials

Calculate costs based on the identified services (labor hours, number of employees, volume, fixed prices, etc.

Add discounts and surcharges.

Printable PDF printable Ability to generate a quote in PDF format

Ability to send the quote directly to the customer's email. ○

Track the status of the quote (sent, accepted, rejected, pending)

(Expenses:) Manage Expenses -

). Record expenses related to operations (e.g: Fuel, Maintenance, Materials ○

Identify the expense category, date, amount, and notes ○

View a summary of expenses by period or category ○

(Revenues): Revenue Management -

Record revenue received from customers. ○

Automatic correlation between accepted quotes and revenue ○

View a summary of revenue by period. ○

(Invoices:) Invoice Management -

Create invoices based on accepted quotes or as standalone invoices ○

Include invoice details (invoice number, issue date, due date, services, amounts ○ Bezahl). (Bar or cash payment

(Anzahlung) ○ Add payment options provided ○

(Mahngebühr). Adding late fees ○

Calculate VAT (with inclusive/exclusive/exempt options) ○ PDF. Ability to generate
an invoice in PDF format

Ability to send the invoice directly to the customer's email.

Reports and analytics -

Graphical dashboards showing performance statistics for the company (e.g: Number of quotes accepted, revenue ○
) vs. expenses, task performance

4.3. Employee Interface:

Task View -

List of tasks assigned to the employee ○

View the details of each task ○

Task Requirement File Access to the task.

Update task status -.

"Change the status of the task (e.g: "In progress", "Completed

Download the result file -

(.Final Result File) when the task is completed (supports common file types) File""Task""Ability to load ○

4.4. Client Interaction:

:Receive quotes -.

Receive quotes via email PDF Receive quotes in PDF format

Pay online -

Ability to click on a link in the quote to go to a secure online payment page to complete the payment (integration with a payment gateway).

5. Non-Functional Requirements:

Language: The front-end must be entirely in German -

Performance: The system must be responsive (page load time and response time is less than 2 seconds in most cases).

Scalability: The system must be designed to efficiently support a growing number of companies, users, and data. -

Security -

- Secure login (encrypted passwords, possibly two-factor authentication). Isolate each company's data to ensure that no company has access to another company's data.
- (SSL/TLS). Encryption of sensitive data (e.g. payment information) in the database and in transit (FADP standards) Compliance with Swiss data protection laws (especially Swiss data protection laws -
- Cybersecurity.
-
-
-

Reliability -

High system availability (99.9% uptime target)
Data backup and disaster recovery mechanisms ○

(Usability:) Ease of use -

- Intuitive and easy-to-use user interface for all roles (manager, employee, general administrator) to support use on different devices (PC, tablet, phone) (Responsive Design)
- The
-
- system should be easy to maintain, update, and add new features.

Maintenance - ○

Mailgun). SendGrid, integration with an email sending service (e.g:

Integration - -

Stripe). Saferpay, PostFinance, integration with a secure and reliable Swiss payment gateway (e.g:

-
-
-
-
-

:Additional Notes 6.

No packages: There is no multiple package system, companies sign up and have access to all features -.

No attendance tracking: The system does not include a feature to track employee attendance, just manage their data and tasks. -

Focus on ease: The system should be easy to use and not require extensive training.
